

Form Letter ZM:

When the trains are loaded in Montana, Millennium puts a liquid cover like a glue on top of the cars. This eliminates a lot of the coal dust that would normally come off of train cars. Environmental reports have already been done for many of the shipping processes. These reports should be relied upon and incorporated into the EIS for Millennium's proposal. Don't feel like you need to recreate the wheel and further delay much-needed private investment! Remember what matters and keep the focus local!
